

# RJB COIN - WHITEPAPER

English Version

## 1. Introduction

RJB Coin is a next-generation cryptocurrency that combines the power of decentralized mining (like Bitcoin) with artificial intelligence to enhance security, optimization, and adaptability.

## 2. Technical Architecture

- Local Proof-of-Work (PoW) blockchain
- Autonomous mining on PC/Mac
- Embedded AI for fraud detection
- Web3 version via ERC20 smart contracts on BNB Chain

## 3. Tokenomics

- Max supply: 21,000,000 RJB
- Initial presale: 5,000,000 RJB at 0.20 USDT
- Distribution: 25% mining, 25% team, 50% sale

## 4. Comparison RJB Coin vs Bitcoin

Feature	Bitcoin	RJB Coin
----- ----- -----		
Consensus	Proof-of-Work	Proof-of-Work + AI
Smart contract	No	Yes, secure
AI integrated	No	Yes
Transaction fees	High	Low (<0.01\$)
Transaction speed	10-60 min	1-3 sec

Accessibility	Complex	Easy via Metamask
Programmable	No	Yes

## 5. Fees and transfer time

- On BNB Chain: ~0.01\$ per transaction
- On local RJB blockchain: free
- BNB transfer time: 3-6 seconds
- RJB local time: instant (~1 to 3 seconds)

## 6. Long-term vision

RJB Coin aims to become a smart, secure, and adaptable value network, ready for Web3 usage, micro-payments, DeFi, and AI integrations. Its governance will be community-driven, and its mining open to all.
